

Akash Soni

Full-stack Software Engineer

📍 Raipur, Chhattisgarh, India · 📧 asoni7667@gmail.com · 📞 +91 7581912130 · [🌐 LinkedIn](#) · [🌐 Portfolio](#) · [🔒 Verified Cloud-ID](#)

Software engineer with 6+ years delivering technical solutions for enterprise clients — from cloud data-platform migrations to API integrations used by healthcare and energy partners. Proven track record in SQL database engineering, AWS & Azure cloud architecture, and building reusable tools adopted across product lines. Hands-on experience in technical troubleshooting, stakeholder management, and end-to-end technical implementation that directly improves customer outcomes.

Skills

Languages & Frameworks	C# / .NET, .NET Core, .NET Framework 4.8, SQL, TypeScript, JavaScript, HTML/CSS
Cloud — AWS & Azure	Lambda (Node 20 · ARM64), API Gateway, Redshift, DynamoDB, S3 + CloudFront (OAC), Cognito (JWT), Secrets Manager, AWS CDK (IaC), EC2, Azure
Data & Analytics	Database Engineering, SSAS, SSRS, ETL Pipelines, SQLite, Apache NiFi
Frontend	Angular (v19), Vue (v3), RxJS, Excel Add-In (Office JS)
Integration & APIs	High-throughput Integration APIs, Redox API (EHR), CSV/Excel Bulk Upload, NuGet Packaging, CLI Tooling
Security	JWT Auth, Session Management, Access Control, Multi-tenant Isolation, Security Hardening (HIPAA-adjacent)
Practices	SOLID, System Design, Microservices, TDD, DSA, Cloud Architecture, LLM Integration, Prompt Engineering, End-to-End Delivery

Work Experience

Software Engineer at Energy Exemplar Pune, India · Jun 2025 – Mar 2026

- Designed and delivered the Import/Export integration subsystem for PLEXOS Cloud using C#/.NET, packaging core logic as a reusable NuGet service library with a clean interface contract.
- Built a cross-platform CLI tool on top of the NuGet library, transforming PTI Raw files into SQLite databases.
- Developed a desktop-style Excel Add-In (Vue.js UI) integrating with the backend library.
- Contributed to the EE Marketplace front-end using Vue.js.

Software Engineer (Professional Engineer) at eGain Communications Pune, India · Sep 2021 – May 2025

- Designed and maintained high-throughput integration APIs in C#/.NET.
- Worked on the service-oriented platform modernization of the analytics layer, migrating from SSAS to AWS Redshift with Apache NiFi data flows.
- Automated operational workflows using .NET Core, AWS Lambda, EC2, and Secrets Manager.
- Produced and customized SSRS reports delivering stakeholder-facing insights.

Software Developer at IKS Health Mumbai, India · Feb 2020 – Sep 2021

- Hardened access control for the Scribble WFM platform by engineering a JWT-based authentication module.
- Integrated the platform with the Redox API for real-time EHR data exchange.
- Developed a generic CSV/Excel bulk-upload integration using Angular with .NET MVC.
- Designed a performance leaderboard to drive continuous improvement metrics.

Projects

AI-Powered Review Intelligence Apr 2026 – May 2026

- End-to-end full-stack serverless SaaS, designed and shipped solo — built collaboratively with Claude Code (Anthropic) as a pair-programmer.
- Customers scan a QR, tap a star, and get 5 AI-generated review suggestions in under 30 seconds.
- Architected a serverless AWS stack via AWS CDK (API Gateway, Lambda Node.js 20 ARM64, DynamoDB on-demand, S3 + CloudFront with OAC, Cognito JWT, Secrets Manager).
- Built a provider-agnostic LLM client — hot-swap Anthropic Claude / Gemini / any OpenAI-compatible endpoint without redeploy.
- Plus-tier owner dashboard with scan analytics, QR generator, and self-service shop config; block-all-public S3 + JWT-derived shopId (never trusted from the request body) for hardened multi-tenant isolation.

Import / Export Service Library & CLI Reusable .NET library

- Designed a reusable NuGet service library and cross-platform CLI that packaged core integration logic for PTI Raw file transformation.
- Clean interface contract so multiple product surfaces (CLI, Excel Add-In, cloud) reuse one core; transforms PTI Raw files into queryable SQLite databases.

Analytics Platform Modernization (SSAS → AWS Redshift)

- Worked on the migration of enterprise analytics from a legacy SSAS stack to AWS Redshift.
- Redesigned ETL pipelines, refactored the data-access layer, and introduced automated validation to de-risk the cutover.

[AWS Redshift](#) [Apache NiFi](#) [ETL](#) [C#/.NET](#)

JWT Auth Hardening for Healthcare SaaS Security engineering

- Resolved critical security vulnerabilities across a HIPAA-adjacent clinical SaaS platform — engineered JWT authentication, corrected session-management flaws, and secured document-management services against unauthorized access.

Education

CDAC ACTS, Pune 2020

Post Graduate Diploma in Advanced Computing — 80.5%

NIT Raipur 2017

B.Tech in Information Technology — CGPA 7.55 / 10

Certificates

Introduction to Cloud Computing — Coursera Jan 2024

Prompt Engineering — How to Talk to the AI — LinkedIn Learning Aug 2025
